3D BiCS FLASH™: The Future of High-Density Flash Memory

KIOXIA delivers flash-based products for next-generation storage applications. Having invented NAND flash over 30 years ago, KIOXIA is now one of the world’s largest flash memory suppliers – and continues to move the technology forward.

Why 3D Memory?

Moving to a 3D structure was a necessary evolution from 2D floating gate flash, because the memory cell size for 2D flash had shrunk to its limit. Floating gate’s last generation was 15nm, which enabled a density of 128Gb per die. Compared to floating gate, BiCS FLASH 3D flash memory offers higher density, higher endurance, higher performance and better power efficiency. Single die densities of 256Gb and higher are now possible with BiCS FLASH.

DENSITIES OFFERED

Based on 16-die stacked architecture in a single package

<table>
<thead>
<tr>
<th>TLC</th>
<th>QLC</th>
</tr>
</thead>
<tbody>
<tr>
<td>Triple-Level Cell</td>
<td>Quad-Level Cell</td>
</tr>
<tr>
<td>1TB Single-package device with 512Gb die</td>
<td>2.66TB Single-package device with 1.33Tb die</td>
</tr>
<tr>
<td>BENEFITS OF QLC</td>
<td>Highest density flash (2.66Tb single package)</td>
</tr>
<tr>
<td>Lowest cost per bit</td>
<td></td>

Why 3D Memory?

Moving to a 3D structure was a necessary evolution from 2D floating gate flash, because the memory cell size for 2D flash had shrunk to its limit. Floating gate’s last generation was 15nm, which enabled a density of 128Gb per die. Compared to floating gate, BiCS FLASH 3D flash memory offers higher density, higher endurance, higher performance and better power efficiency. Single die densities of 256Gb and higher are now possible with BiCS FLASH.

APPLICATIONS

- Automotive
- PCs
- Data Centers
- Enterprise
- Tablets
- Smartphones
- Gaming

The future of high-density flash memory lies in 3D. Already enabling the enterprise, data center, PC and mobile applications of today, our BiCS FLASH has paved the way for the applications that will turn possibilities into realities. Storage density needs are continually climbing higher and higher – and we designed BiCS FLASH with this in mind.”

– Scott Nelson, Senior Vice President and General Manager, Memory Business Unit, KIOXIA

[1] Product density is identified based on the density of memory chip(s) within the Product, not the amount of memory capacity available for data storage by the end user. Consumer-usable capacity will be less due to various factors including: formatting, bad blocks, and other constraints, and may also vary based on the host device and application. For details, please refer to applicable product specifications. The definition of 1Gb = 2^30 bits = 1,073,741,824 bits. The definition of 1GB = 2^30 bytes = 1,073,741,824 bytes.
